NPIC Project J-229/63

Extensive new construction is taking place at the Pavlodar Aluminum Combine on the southeastern outskirts of Pavlodar, USSR. The plant was entirely new when first seen on KEY-HOLE [REDACTED]

[REDACTED] having been built since TALENT coverage of [REDACTED]

small alumina plant was present to the north-

west of the combine site. Now the combine has expanded at least 50 percent since the [REDACTED] coverage. The combine as a whole appears to be in a late stage of construction and not yet operational. It shows evidence of using large quantities of heat and power. Figure 1 shows the portions of the plant which are new since [REDACTED]
